School Newsletter: Issue II

2020-21

From Principal's Desk

Editorial

You might have come across the term personal growth. Personal growth is also called self-improvement and self-growth. COVID 19 pandemic has forced many to look into their personal growth.

Successful personal growth requires motivation, the desire to improve, and the willingness to strive to make changes. The COVID 19 pandemic has devastated many, however many others have taken this situation as an opportunity for their personal growth.

We need to be willing to get out of our comfort zone, and sometimes, do things that are not comfortable, but are for our own good. An open mind and the desire to learn and grow are also important.

Personal growth is an ongoing process that starts from an early age, but mostly shaped by parents, teachers, situations and the environment. However to make the most of it, we need to become aware of the process, know what it is, and take the right steps to grow and improve ourselves.

Sometimes, problems and difficulties are the triggers that awaken the desire to grow, and lead to making changes in one's life. At other times, people are inspired to take steps toward personal growth after reading an inspiring book, watching a movie or reading about people who achieved success.

This often leads people to new paths, to making changes in their lives, expanding their knowledge and self-awareness, improving skills, and developing new ones.

Personal growth can help us in all areas of life. It will help us in studies. It can change our attitude toward work, and therefore, open new opportunities for advancement.

I congratulate the Editorial Team for collating all the events of Term I and publishing Issue I of School Newsletter

Tech gives the quietest student a voice -Jerry Blumengarten

This is that time of the year when another wave of Covid has come and gone and teachers and students are now resigned to the fact the virtual school is here to stay for a longer duration.

Today schools have to embrace and use technology to connect with students and to pass on knowledge and understanding. Suddenly the education field is more exciting as the word "collaboration" has made a paradigm shift in how teachers were imparting knowledge in the classroom.

Often when we use the word "Collaboration" by teachers it is often used to indicate a group of students working on a project, solve a math problem or create something together. But today, I feel we need to expand the idea to include teachers, members of the technology department, guidance counselors, parents and community members, that would be a true collaboration in education.

With the advent of virtual classrooms, students and teachers are exposed to a wide range of apps and software which help to impart knowledge and assist in understanding the finer nuances of a subject. The student can learn at his own pace and he can collaborate with his friends and teachers using the various online softwares and apps that are available.

We as teachers, need to open up the often closed doors and allow for a deeper participation from 'partners' outside our schools, by seeking out learning opportunities for our students that go beyond the walls of the classroom and are truly experiential and powerful.

At the end of the day, we all learn best when we are excited, engaged and working with others. Hence it is very necessary to use various learning platforms and technology to impact the students positively. Now classroom experience can be transformed into a more exciting one, using Augmented Reality and Virtual Reality technologies. However, in a developing nation like India, the only impediment is the internet speed and its availability to all strata of society. We need to ensure that just like food, water and shelter, we also are able to provide, cheap, fast and efficient internet to all Indians, at all public places, so that the teaching learning curve is not limited to a selective few based on their economic status.

I feel technology would be a true liberator and as teachers we need to prepare our younger generation to face this new reality.

We need technology in every classroom and in every student and teachers hand, because it is the pen and paper of our time and it is the lens through which we experience much of the world -David Warlick.

-Annie Kurien
